DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of group II comprising claim 8 in the reply filed on 5/16/2006 is acknowledged. The traversal is on the ground(s) that all of the claims can be examined without undue burden. This is not found persuasive because the different inventions have different designs. As discussed in the restriction requirement, the different inventions incorporate different features that would involve different considerations in determining patentability. Clearly, different searches and patentability determination issues are involved in the examination of each invention. The requirement is still deemed proper and is therefore made FINAL. Claims 1 – 7 and 9 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 8 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The term MEA appears to be not defined in the specification. Regarding the subject matter of the

Art Unit: 1743

claimed invention, the Examiner presumes that MEA is an art term for “membrane electrode assembly.”

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: It is unclear as to how the water reservoir is arranged with respect to the gas sensor. Is the water reservoir contained within the gas sensor? The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional cited prior art teach various pertinent gas sensing devices.
